

BlackMaxx All-in-One COUPLER BY

Strong, Lightweight, Corrosion Resistant and Cuts Cleaning Time and Inventory Costs

Our BlackMaxx All-in-One Coupler not only can take the place of three types of couplers, Grooved to Grooved, Grooved to Plain, and Plain to Plain, it is constructed of a composite fiber material that is lightweight, strong and impervious to corrosion.

The BlackMaxx All-in-One Coupler incorporates many features to drastically reduce the costly down time of repairs. Cleaning time and expense are now drastically reduced—simply align the pipes and quickly and easily slip on B.T.I.'s BlackMaxx All-in-One Coupler.

The new coupler offers some industry first innovations.

- A** Composite fiber body. Composite fiber is a material currently used in the aerospace and auto industry due to its strength and weight reduction characteristics
 - Corrosion resistant
 - Weight reduction of over 50% compared to other couplers on the market
- B** The revolutionary All-in-One design incorporates eight S-clip gripper locations that "bite" into the pipe as air pressure increases and the pipes attempt to separate. The greater the pressure, the greater the grip, regardless of the type of pipe. All-in-One Couplers are positioned to grip whether they are used on plain or grooved pipes and eliminate the need to groove pipes or tees, reducing part costs.
- C** The coupler offers two gasket configurations; split or solid. Suspended in the gasket material is a unique FDA-approved lubricant that eliminates the need for additional lubrication. On split gasket configurations pull tabs keep the gasket in position during installation, ensuring a secure seal.
- D** Exclusive safety lock and pin prevents the coupler from opening while under pressure
 - Two closure options: Cam Handle or a Bolt On Tee Handle
 - Available in a 4 inch size
 - The exclusive hinge design matches the curve of the gasket. It is moved closer to the inside body to eliminate pinching of the gasket as in previous design couplers.

Even though the innovative design of B.T.I.'s All-in-One Coupler far exceeds any existing model, the cost compares with traditional couplers.
