

**INCREASE YOUR
UNLOADING SPEED
UP TO 30%**

ACCELERATOR 
TECHNOLOGY

LIVING UP TO THE HIGHEST STANDARDS IN DRIVE UNIT TECHNOLOGY

The Hallco Accelerator[™] is a patented*, innovative drive unit enhancement allowing all Live Floors[™] operators to unload trailers faster than ever before. Some loads don't require the full force of our 3-step cycle, so the Accelerator provides the option of a 2-step cycle, which unloads trailers up to 30% faster. The Hallco Accelerator[™] works with all tractors without increasing gpm or pressure on your systems.

> HOW THE ACCELERATOR™ WORKS: <

The Hallco Accelerator™ integrates seamlessly with the drive’s hydraulic system, so there are no new hydraulic parts or unproven hydraulic technologies involved. With this simplicity comes the advantage of reliability. The Hallco Accelerator™ consists of a simple mechanical switch, without additional hydraulic parts to break or need to purchase a larger wet kit hydraulic pump.

The flexibility of this new technology allows the user to switch between both modes during the unloading process, creating the fastest and most efficient product movement. Our Hallco Accelerator™ is so reliable and effective, it is now standard on all applicable Hallco drive units of i-2000 and larger.

> KEY FEATURES: <

Can be retrofitted to any of our existing drive unit

So reliable and effective, it has become standard on all applicable Hallco drive units

Available only through Hallco Industries, Inc.

Can be “switched on the fly” between our standard 3-step and Accelerator™ 2-step operation modes

Functions through the drive’s hydraulic system; no new parts or unproven technologies involved
