

SAVE \$1,000s in Maintenance Cost

BTI's ULTRA-LIGHT MANHOLE ASSEMBLY

Manhole maintenance is extremely expensive. BTI's Ultra-Light Manhole Assembly is the Industry's first and only assembly designed to expressly save maintenance costs. Check out these 3 patent-pending features.

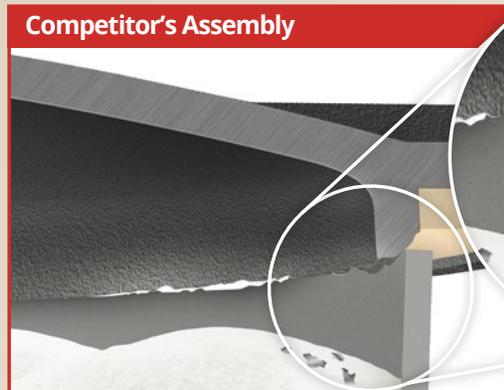

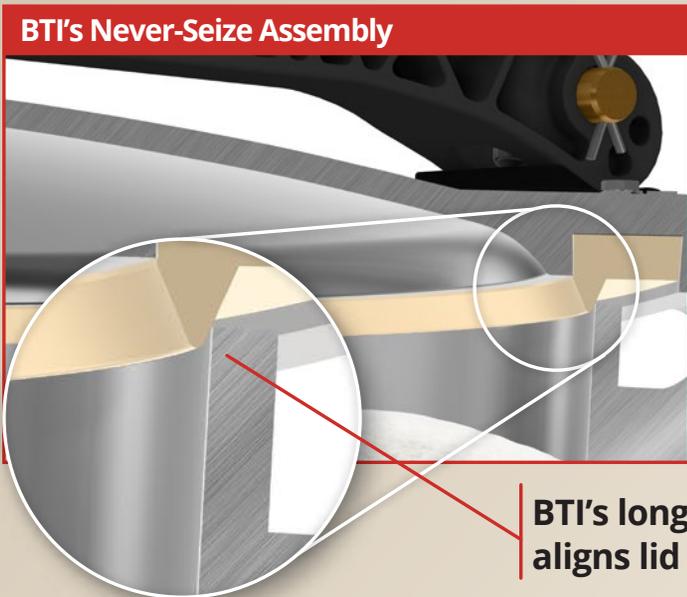

#1 BTI's Never-Seize Dry Bulk Manhole Adjusters

Guaranteed to keep your adjusters operating longer and working better.

- A** Sealed adjustment threads
- B** O-Ring Seal - Protects contamination of threads
- C** Built-in Scraper

Never-seize adjusters come with a 10-year warranty. Parts are interchangeable with leading manufacturers.

#2 Self-Aligning Lid Gasket - Saves your lid and collar

Competitor's lid with metal alignment lip causes chipping of collar and aligner allowing metal to end up in the load.

BTI's long-lasting and super tough FDA compliant gasket aligns lid to collar preventing metal-to-metal contact.

#3 Wearplate - New design allows for easy and quick replacement of wear plates

Not all replaceable wearplates are replaceable.

Corrosion builds up between the lid and the bolts making the replaceable wearplate *non-replaceable*. When it is time to replace the wearplates the heads of the bolts break off causing major time and, in some cases, total lid replacement.

Problem solved.

BTI's innovative solution stops corrosion and is guaranteed to provide years of problem free operation. Saving time and money!

All BTI products are guaranteed to:
LAST LONGER. WORK BETTER.
